Above link will take you to the product and if you scroll down to the blue links you can read the articles on it.

We use in the case of hypoglycemia

Please read this page on hypoglycemia in Pomeranians. It is very important

<https://pomeranian.org/low-blood-sugar-levels-affect-puppies-far-more-than-adult-dogs/>

If your puppy goes hypoglycemic we have given you clear Karo syrup to administer immediately with you finger to rub on gums and to administer 1cc in the mouth slowly. It can also be diluted to less thick with warm water and given by syringe.

We are not a veterinarian and do not claim to be. We are very experienced with our breed.. These are things we use in our program that work for us.

Call us if anything is wrong so we can help you.

In a serious emergency please call your veterinarian and then us.
